Handling rules

Radioactive material (RAM) presented for transport is packaged in accordance with the IAEA Regulations which ensures that it is safe to handle under normal conditions. Nevertheless, to prevent unnecessary exposure to radiation there are certain basic rules that should be followed as the radiation exposure received will depend on how long and how close a person remains near packages containing RAM.

- Contact time with the package should be kept short
- RAM packages should be handled without delay — keep it moving
- No-one should stand around, sit near or sit on a RAM package
- Time consuming tasks, such as paperwork, should not be carried out near a RAM package
- All personnel should be kept as far away as practicable from packages containing RAM
- RAM packages should be stored well away from offices, rest rooms and occupied work areas
- When transporting RAM packages any long distance, the vehicle used should allow the driver to maintain a distance of at least a metre or more from the packages
- RAM packages should be secured so that they will not move during transport — small, light packages should be stored in a basket while larger, heavy packages should be properly blocked and braced
- RAM packages must not be stored in the one location with transport indexes that add up to more than 50. (The transport index is written on the Yellow Category II or Category III label.)

Dangerous Goods Class Loading Restrictions for Road and Rail

UN Recommendations on the Transport of Dangerous Goods – Model Regulations Eighteenth revised edition

- The requirements of this clause are additional to those of the Australian Code for the Safe Transport of Radioactive Material in relation to the compatibility of radioactive material with other dangerous goods, food, undeveloped photographic film and personnel.
- Radioactive material must be segregated from other incompatible dangerous goods so as to minimise hazards in the event of accidental leakage, spillage or other accident.
- Whenever other dangerous goods are stowed with radioactive material, the most stringent segregation provisions for any of the goods apply.

Notes

The term "fissile-excepted" refers only to material excepted under para. 417.

The "PROPER SHIPPING NAME" is found in the column "PROPER SHIPPING NAME and description" and is restricted to that part shown in CAPITAL LETTERS. In the cases of UN 2909, UN 2911, UN 2913 and UN 3326, where alternative proper shipping names are separated by the word "or", only the relevant proper shipping name shall be used.
